

# MADONNA REHABILITATION DAY PROGRAM LINCOLN

The Madonna Rehabilitation Day Program-Lincoln (RDP) is coordinated outpatient therapy dedicated to help adults and children with a physical or cognitive disability learn to function more independently in their home and community. RDP provides an intense and holistically-oriented approach that includes medical monitoring, coordinated therapies and education.

**114** NUMBER OF PEOPLE SERVED

Program	# Served
Brain Injury	30
Stroke	42
Neuro	9
Spinal Cord Injury	17
Cancer	7
Amputee	1
Post-COVID	1
Other	7

The average age was **50** years old, including **17** children and adolescents.

## AVERAGE AMOUNT OF THERAPY

Treatment plans are designed to meet individual needs and insurance coverage. The graph below indicates, on average, the number of days patients received therapy last year:

Therapy	Days
Physical	14.4
Occupational	15.9
Speech	15.5

As a part of RDP, patients may also receive recreational therapy, social work services, rehabilitation nursing, rehabilitation psychology and/or nutrition services.

## PATIENT SATISFACTION

**98%** of people in RDP rated their overall experience as excellent.

**100%** of people in RDP said they would definitely recommend Madonna to family and friends.

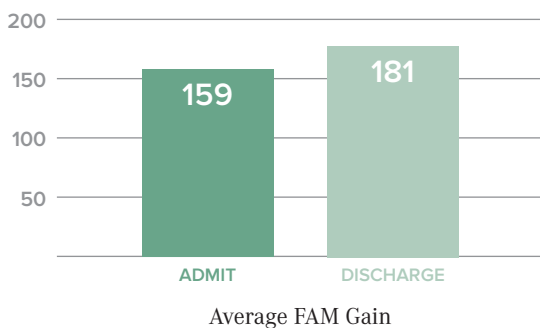

## LENGTH OF PROGRAM

Patients are seen 3-5 days per week while in RDP. Last year, adults attended RDP for an average of **18** non-consecutive days. Children and adolescents attended an average of **15** non-consecutive days.

## INDEPENDENCE LEVEL

Patients in Madonna’s Rehabilitation Day Program made progress toward independence as measured by the Functional Assessment Measure (FAM). Activities including cognitive, behavioral, communication and communication functioning are rated on a 1-7 scale and totaled. On average, people in RDP admitted requiring minimal assistance and discharged requiring supervision to modified independent level of care. Below is a representation of average FAM score change in RDP:

## DISCHARGE

Long term goals met at discharge for adults was **88%** and children/adolescents was **88%**. Many individuals will require intermittent outpatient therapy after their discharge from RDP. Depending upon where you live, this could occur at Madonna or in your home community.

Transition/Discharge Plan	# Served
Completed Program no further treatment recommended	7
Madonna OP	57
OP in a Home Community	30
Skilled Facility	1
Home Health	3
Did Not Complete Program	2
Return to Acute	0
Other	4

Patients returning to acute during their RDP stay are able to return and complete the program if medically stable with a physician order.

## ACCREDITATION

Madonna Rehabilitation Hospitals have received the highest possible level of distinction from the Commission on Accreditation of Rehabilitation Facilities (CARF) for its overall Outpatient Medical Rehabilitation Program as well as its outpatient Brain Injury, Spinal Cord Injury, Stroke and Pediatric Specialty Programs.
